

The Informatization of Public Administration

Sofia COLESCA, Senior Lecturer Ph. D

Abstract: Information technology represents in the last decades the new challenge of the world economy. The fast achievements in this field affect more and more the way of living, working, learning or entertaining. Because of its deep impact over the society, this phenomenon is appreciated as a main feature of the new type of society – the Information Society.

For this reason, the rationale use of new information technologies, both intensively as extensively, is essential to manage the public administration reform. The necessary actions to achieve the proposed objectives have to become operational immediately, producing new efficient and modern public services for the citizens and business community.
