

# **The positive analysis about the condition of Chinese technology gain FDI**

**Bi Hong-yi, Professor Ph. D**

**Resume:** The technical level in 21<sup>st</sup> century will directly decide the international competition ability of a country and become the core factor which the international competition will subdue. Using the reverse effect of shift of technology in foreign investment, a company gains advanced technology through foreign investment and shift it to the investment country, which movement we call it technical gain FDI. Various countries in the world especially the developing countries, such as China, its research level and the environment can't adapt the demand of economic globalization. So it is a realistic choice to the developing countries to develop technology gain investment and combine with the other foreign investment to gain the advanced technology.

**Keywords:** Technology gain investment, FDI, Shift of technology, Advanced technology.
