**“Everything that can be counted doesn't necessarily count;
everything that counts can't necessarily be counted”**

Albert Einstein

Abstract: In the present conditions of the beginning of the millennium, in the context of the extraordinary scientifically and technological progress, the need for studying the efficiency of the academic studies from the education system at the macro systemic level is implied by the importance given by the society to it. The connection between the level of civilization and the society's level of development on the one side and the education system on the other side is quite clear in the actual conditions. This conclusion is validated only by looking at the fact that countries having a efficient education system, are in fact the developed countries.

Key words: public services, education, efficiency, system, indicators.
